

GPT-3 : what it is ?

GPT-3 is a language model developed by Open AI. Trained with more than 175 billion parameters and more than 200 billion words from books, wikipedia and the web.

GPT-3's artificial intelligence is thus capable with little context of :

- **translating texts** into the language of your choice
- carrying out simple calculations (additions, subtractions)
- **predicting the continuation of a sentence**
- **finding the answers to all general culture questions**
- **programming for** you in CSS, python, javascript,...

And even **write entire 1,500-word articles** with just a few keywords as input

Let's see it in action !
